AI in Security: Fad, Fiction or Fact?

As cyber-threats continue to push businesses to their defensive limits, more and more enterprises are turning to automation and ‘cognitive computing’ to improve the proficiency of their security efforts hoping for quicker response times, better threat detection, the ability to process and analyze large amounts of data and to free up vital staff time.

10.45-
11.45

1 hour
session

However, how much hype is there around the true effectiveness of AI in security? Is it really the panacea that it is so often referred to, or should more caution be taken when considering how much reliance should be put into AI technologies?

Michael Hill

This session will explore:

- The true effectiveness of AI technology in information security
- How to get the most out of automation, and when to look elsewhere
- The role of AI in the future of cybersecurity

The Benefits of a Diverse Security Workforce

It’s widely agreed that a diverse workforce is a superior workforce, with varied opinions and different ways of thinking often leading to better decisions that can result in improved business outcomes.

12.00-
13.00

1 hour
session

However, the information security industry is often criticized for lacking the diversity present in other sectors, and it can suffer as a result.
